

BACK TO FRONT EXTERIOR DESIGN

Consultancy

We use your photographs to help us understand as much about your property as we can, so we can assist you as best we can with your project. Please see below some tips to use when photographing your home:

LANDSCAPE

Please take a photo in landscape not portrait. This allows us to have a better understanding of your home and the plot.

FRONT & REAR

We need to see a photo of the front and rear of your home so we can consider which external treatments would be most suitable for you.

CLEAR OBSTRUCTIONS

Move any vehicles, bins or any other items/objects which obscure the view of the property

STRAIGHT

Take the photo as straight and level as possible, making sure not to crop the house out of the photograph

FILE SIZE

Make sure you take a high resolution photograph in focus and avoid any blurring. A good file size is between 2MB-4M

Photo: 2.5MB

Photo: 47KB
